

Environment and Sustainability Policy

Objective

Connect Plus proactively manages the environmental by positively influencing the M25 Community. We actively look for ways to reduce negative environmental impacts so that we are known as a company capable of managing the M25 but also as an environmentally responsible company. Connect Plus Chief Executive Officer leads the implementation of this policy but we all contribute to its success.

What this policy demands of us

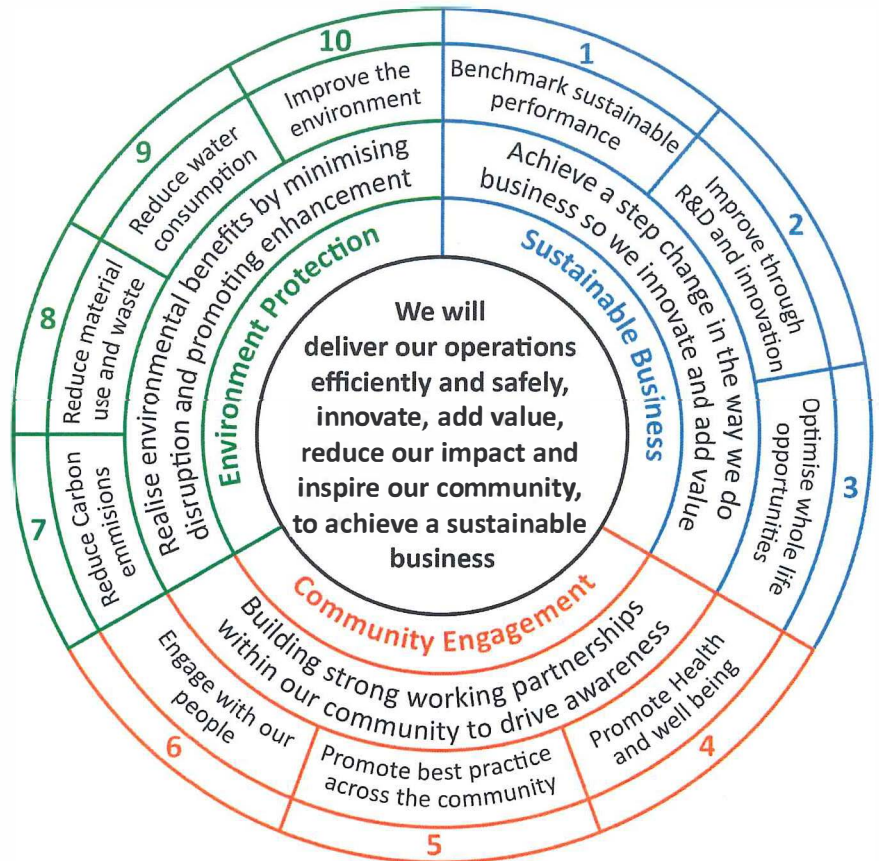

We **comply** with all relevant laws, regulations, standards, including ISO 14001, and with the M25 DBFO Contract.

We maintain a **sustainable business** using innovative whole life strategies to improve the performance of the Network

We **works closely** with the M25 Community to engage people to share best practice and build a healthy community.

We **protect and improve the environment**, focusing on reducing emissions, water use and wastes and minimising disruption.

Every year we put together and work toward objectives that will foster improvements to our environment management system.
